Leaders since four decades in vacuum engineering, our experience has helped us design centralised vacuum system - TCS and TCD series.

The TCS and TCD series are mainly formed by

- Pumps having pumping speed from 15 to 1000 m$^3$/hr
- Back-up volumes 300L to 1000L (larger buffer tank upon request)
- The pumps are oil lubricated type (not oil immersed). The lubricant system is rated for continuous operation at high intake pressure.
  - High pumping speed, Multivane, No pollution, Air Cooled, Built in Anti Suck-Back System
  - Higher water vapour tolerance and low noise level.
- Choice of selection of required operating pressure from wide vacuum range the system can cater. The buffer tank vacuum level can be controlled from 1mbar to 850mbar (absolute)

The centralised vacuum system is with vacuum controller. The controller drives the pump. At peak demand both the pumps, and during normal demand, only one will be running. The running hour meter helps to change over manually, so as to evenly spread the number of operating hours across both the pumps. Your benefits are all more apparent, higher productivity, lower running costs.

Toshniwal’s centralised vacuum system can be used in various vacuum applications such as

- Hospitals
- Packaging industries
- General manufacturing plant
- Laboratories.
For all those central system requirement in medical field such as Hospitals, Clinics, Nursing Homes, Analytical Laboratories (bio technology) etc., we suggest special MEDI SYSTEM, manufactured in observance of EN 737-3 standards.

Centralised system with three pumps to guarantee the continuity of operation also in case of emergency.

Two antibacterial filters to trap virus and bacteria avoiding their propagation to environment. Bypass system for easy service.

MEDI SYSTEM can be supplied as turnkey system with distribution lines and ward unit.
